The BSF recently announced a new opportunity for Marine Biologists in the framework of the NSF-BSF cooperation in Ecology and Environment of Infectious Diseases (EEID) program. The program added Marine Biology to its areas of interest, although naturally only aspects that may be relevant to Ecology and/or Environment of Infectious Diseases This particular opportunity includes not only the NSF, but also the NIH, the United Kingdom and China

If you have a relevant research idea, and a potential partner, it is highly recommended that the you and your research partner in Israel approach one of the EEID program directors at the NSF, and discuss with him/her the applicability of your research idea to the program. NSF program directors not only welcome such a query, but expect it. Please find below a link to the program description:
